

UPCOMING EVENT

FANUC: Aligning Skills Between Industry & Education

Discover how the BEST Center (GCC) is preparing students for careers in advanced manufacturing through industrial robotics and automation education programs.

Presented by:

FANUC

Business Employee Skills Training
Genesee Community College

The need for skilled workers with automation training and certifications continues to grow. Please join us for a lively discussion with business and education leaders about how automation is changing the landscape of the industrial workforce in New York, and how education across the state should respond.

Now, employers and schools can leverage world-class robotics and CNC technologies and educational programs to deliver hands-on, skills-based learning, preparing the future manufacturing workforce to succeed in high-wage, high-demand automation careers.

Hear from industry & education experts about the challenges facing the manufacturing sector and the opportunities that funding and educational programs can offer employers, workers and students. This event is open to K-12 educators, post-secondary educators and employers. Although there is no cost to attend, your registration is kindly requested. Lunch will be provided.
